# Acceptable Use of Generative AI Tools

## Scope

This policy applies to public chatbots, writing assistants and any other tool that sends text to an outside service.

## What you may not enter

Do not enter customer names, account numbers, national identity numbers, phone numbers, claim details, loan files, salary data or any document marked restricted or confidential into a public AI tool.

## What you may do

You may use a public AI tool for general drafting, translation and learning, using text that contains no Kitara data. You must check every result before you use it in work.

## Approved sandbox

IT will provide an internal AI sandbox that runs inside Kitara systems. Staff register with IT Security before use. Prompts and results in the sandbox are logged and kept for 12 months.

## Breach

Entering restricted data into a public tool is reported to IT Security within one hour and handled as a security incident.
