# Password and Access Standard

## Passwords

A password has at least 12 characters and is not a dictionary word, a name or a date of birth. Passwords are not changed on a fixed calendar, but must be changed at once if there is a suspicion that they are known to someone else. The same password is never used for Kitara and for personal accounts.

## Privileged access

Administrator accounts are separate from daily accounts, protected by a hardware token and reviewed every month by IT Security.

## Joiners, movers and leavers

Access is given on a written request from the line manager. When a staff member changes department, old access is removed within five working days. A leaver loses access within 24 hours.

## Multi-factor authentication

Multi-factor authentication is required for email, remote access and every system that holds customer data. Kitara supports an authenticator application on a phone or a hardware token. A text message is used only as a fallback. A staff member who changes phone registers the new device before returning the old one.

## Shared and service accounts

Shared accounts are not allowed for people. A service account used by a system has a named owner, a password of at least 20 characters stored in the password vault, and a review every quarter.

## Remote access

Remote access is by the Kitara VPN on a Kitara laptop. A staff member working outside Uganda tells IT Security before travelling. Access from a country on the restricted list is blocked.

## Reviews

System owners review who has access every quarter and confirm the list in writing to IT Security. Access that nobody can justify is removed. IT Security reports the number of accounts removed to the IT Steering Committee.
