Vendor Management Procedure

Onboarding

Each new vendor completes the due diligence form, a tax clearance check and a conflicts declaration. Vendors that handle customer data complete the information security questionnaire.

Contracts

Contracts above UGX 50,000,000 are reviewed by Legal and Compliance. Every contract names a Kitara contract owner, the service levels, the exit terms and how data is returned or destroyed.

Review

The contract owner reviews each vendor every year against service levels. A vendor with two service failures in a quarter is placed on a watch list.

Payment

Finance pays a vendor only against a purchase order, a signed delivery note or service report, and a correct invoice. The contract owner confirms the service report before payment. Advance payments above UGX 10,000,000 need the approval of the Chief Finance Officer.

Data and security

A vendor that handles customer data may process it only for the purpose written in the contract. The vendor tells Kitara within 24 hours of any security incident that affects Kitara data. When the contract ends the vendor returns the data in a standard format and then destroys its copies, and signs a certificate of destruction.

Subcontractors

A vendor may use a subcontractor only with the written consent of the contract owner. The vendor stays responsible for the subcontractor's work and for its handling of data.

Termination

Kitara may end a contract for repeated service failures, a breach of data protection duties or loss of a licence. The contract owner tells Legal and Compliance before notice is given. The exit plan in the contract is followed so that service to customers continues.
