DA24 Parent showcase and next steps

Week 8, Hand over | Session 24 of 24 | Python for Data Analysis

Today's question. What can I show and explain, and what will I learn next?

Objective. By the end: you can present your project, answer questions, and change a small part of it live without AI assistance.

Before this session: DA23 Explain it to a parent. If you cannot explain the last example, use its error card with the instructor first.

Make

Present your project for five minutes and answer three minutes of questions. Explain one calculation, one chart and one limitation. The instructor then chooses one small change, and you make it unaided. Close assistant windows and turn off generative suggestions first. Acknowledge any help you had. Choose one next learning goal. Keep your project folder and feedback.

Save your work as DA24. Keep the worked example and put your own attempt below it. Write two sentences: what you changed and how you checked it.

Error card

You see	It means	Fix
The notebook will not open on the day	The file or environment was not tested on the showcase laptop.	Use the PDF and screenshots, explain the workflow, and arrange a short live rerun afterwards.
A question about the code cannot be answered	The student has not traced that line since they wrote it.	Say what the line is meant to do, then run it on a small input to show it.

Exit ticket

I can show my work, explain it, change one part of it, and name what I will learn next.

AI use follows AI_USE_POLICY.pdf. In weeks 1 to 6 no AI-generated solutions are used for exercises, labs or assessments. Practise for 20 to 30 minutes between classes by repeating the Make task with one value changed. If you are stuck for 30 minutes, save the error and bring it to class. A file saved on your laptop has not been submitted until you use the route in START_HERE.pdf.
