Applied AI and Automation for Executives, KLAi Professional Learning

Twelve sessions of two hours. Each learner carries one real task from their own company from the first session to the last, builds two working automations for it, writes the company's AI-use policy, and ends with a costed business case and a 90-day plan. There are no tests and no marks.

What is in this folder

01 Course Overview	One page to share with a learner before the course.
02 Class Slides	Twelve decks, one for each session, with a spoken script in the speaker notes.
03 Learner Materials	The Learner Workbook, thirteen Templates (scorecard, task card, brief, inventory, review table, test log, tool boundary sheet, risk register, AI-use policy, vendor questions, business case, roadmap), the Follow-up Kit, and the Practice Files (case company data, plus an optional build appendix).
04 Facilitator Materials	The Presenter Script (every slide's spoken script in order, to read from paper or a tablet), the Facilitator Guide with answers and fallbacks, the Answer Keys and the Rehearsal Record. Keep this folder away from learners.
05 Course Maintenance	The sources that build the decks and documents, checks, and notes for whoever maintains the course.

Before the first class

- Send the Course Overview and ask the learner to choose three candidate tasks.
- Complete the Rehearsal Record for Sessions 2 to 8 in your own accounts.
- Read the Facilitator Guide section "How to teach this course".

Rules that keep the course honest

- Never describe an AI result as observed unless you ran it and recorded it.
- Use only sample or invented data with free tools.
- Rebuild the decks and documents from 05 Course Maintenance/Build. Do not edit generated files by hand.
