Applied AI and Automation

Review for company executives: content, branding, value for money and what to change

1 November 2026. No course files were changed. Benchmark facts come from web search summaries (pages could not be opened), so prices and dates need a final check before you quote them.

Summary

Verdict. The course is careful, honest teaching material for one law-firm partner. It does not yet deliver what a company executive pays for: the executive's own work, a business case, a written policy and working automations. The look is not KLAi. None of this needs a rewrite from zero. Most of the assets (notes, demonstrations, risk and pilot material) can be reused in a general executive edition.

Value for money. At UGX 1,000,000 for 24 hours (about UGX 41,700 an hour) the fee is far below comparable programmes. Online university certificates cost roughly US$850 to US$3,850, and in-person executive weeks cost US$6,500 to US$13,500. Price is therefore a small risk. The larger risk is that an executive finishes with understanding but without a finished artefact for their own company.

Five findings

1. The course runs on the instructor's demonstrations. The workbook opens with "I operate the tools while you choose evidence." The original scope promised that each learner would build and test an automation for a task they choose. Sessions 11 and 12 now cover governance and a pilot proposal, and no session is a build session.

2. One legal matter carries all twelve sessions. Every example is Kampala Legal and Tax advising Victoria Services Ltd. HR, sales, finance, customer service, operations, mobile money and agribusiness do not appear in the slides.

3. Several topics executives expect are missing or thin. The words ROI, return on investment, change management and AI literacy appear on no slide. Power Automate, Make and n8n are not mentioned, and Zapier appears on two slides. No session has the learner write their company's AI-use policy or a costed business case.

4. The material does not look or read like KLAi. Slides use navy, teal and orange with Calibri and no logo. KLAi's palette is black, white, red and gold with Lato. About a fifth of slide text is 12 or 13 pt. The workbook is 17 pages of mostly empty grids and the facilitator guide is 53 pages.

5. Housekeeping. The Session 10 deck is missing from the slides folder (a copy is in Authoring/Baseline/Final Decks). Several demonstrations only run on the author's Mac. The Start Here file is plain text.

What is already strong

Every slide has a read-aloud note. The evidence labelling is honest: saved runs are kept apart from simulations. The governance session covers prompt injection, shadow AI, a risk register and Ugandan duties. The pilot work asks for a baseline, owners, costs and stop conditions, which is what the better programmes ask for. The course has no tests, which fits the market: marks are rare in executive programmes.

Decisions needed from you

- Approve the executive edition outline in section 4 (general executives first, legal and tax as an optional lane).
- Choose the automation tool for the build sessions (Zapier, Power Automate or Make) and confirm that you can rehearse it in a real account.
- Decide whether every learner brings one real task and baseline from their company, with 30, 60 and 90 day check-ins.
- Confirm packaging and price. The fee is low against the benchmarks, so the offer should be framed around the artefacts the executive keeps.

1. The course today

Item	What the folder contains
Format	12 sessions of 2 hours, 24 hours in total, one learner, flexible dates, no homework, no coding prerequisite.
Slides	257 slides in 11 decks, plus the Session 10 deck (28 slides in the manifest) that is missing from the folder: 285 in all, 233 essential and 52 optional. 88 explain concepts. Median 40 words a slide, longest 93. Every slide has read-aloud notes.
Workbook	17 pages, about 3,000 words. Each session has a short list of activities and blank record tables.
Facilitator Guide	53 pages, about 20,000 words: 120-minute plans, landmarks, misconceptions, expected answers, demonstration steps.
Practice files	147 files for one fictional matter: a public agreement (Common Paper CSA v3.0), a real Ugandan judgment, a 40-record knowledge library, OCR and retrieval scripts, saved observed runs.
Playbook	8 pages: a worked pilot proposal template for a law firm.
Audience in the text	A law-firm partner and investor. “The firm”, “partner” and legal examples run through the notes and the guide.
Fee (flyer, 30 Oct)	UGX 1,000,000 per learner, groups of 1 to 5, certificate, project from the learner’s own work.

The flyer promises “a project from the learner’s own work”. The current edition teaches from a fictional matter and keeps all required work in class with the instructor operating the tools. The two statements do not match, and an executive will notice.

2. Findings in detail

2.1 Fit for executives

The scope and the edition have drifted apart. The accepted scope listed tool comparison, research and analysis, writing and presentations, data preparation, risks, architectures, workflow automation with Zapier or Power Automate, agents, business and investment assessment, a project build and a testing and demonstration session. The current edition keeps the concepts, retrieval, research, contracts, agents, governance and pilot sessions. It drops writing and presentations, workflow tools and the project build, and it adds three concept sessions and a tax session.

Executives learn by doing their own work. The programmes that executives rate well tie each week to a deliverable and to the participant’s own organisation. In this course the learner watches, chooses evidence and records conclusions. That suits a partner who wants to understand risk. It does not give a managing director a policy, a working automation or a costed plan to take back to the company.

Time per session is sound. Two-hour sessions suit time-poor executives. Each session already ends with a firm decision slide, a strong pattern to keep and to generalise as “the decision this session helps you make”.

2.2 Coverage against industry practice

The table compares what executive programmes and current frameworks cover with what the slides, notes and guide contain. The mentions come from a word search of all 257 slides and the guide text.

Topic executives expect	In this course today	Assessment
How AI works and fails	Sessions 1 to 3: models, tokens, context, hallucination, reliability tests	**Strong. Could be shortened for non-lawyers.**
Using AI tools well	Session 4: briefs, evaluation, vendor questions	**Good. Writing, analysis and presentations are missing.**
Data readiness, search, retrieval	Sessions 5 and 6: inventory, OCR, chunking, access-aware retrieval	**Strong. Built on legal documents only.**
Research and document review	Sessions 7 and 8: legal research, contract review	**Strong for law. Needs a general lane (reports, finance, HR).**
Workflow automation, no code	Session 9: Zapier on 2 slides, local mock host	**Thin. No learner-built automation. Power Automate, Make and n8n absent.**

Topic executives expect	In this course today	Assessment
Agents and controlled actions	Sessions 9 and 10: tool limits, approvals, injection test	**Strong and distinctive.**
Risk, security, law	Session 11: NIST functions, Ugandan duties, injection, shadow AI, risk register	**Good. EU AI Act, the AI literacy duty and ISO 42001 are not covered.**
AI-use policy for the company	Two slide mentions; no policy produced	**Missing as a deliverable.**
Business case, ROI, total cost	Session 12: baseline, a capacity example, cost sheet. ROI: 0 mentions	**Thin. No costed business case template.**
Vendor and procurement oversight	Vendor questions on 3 slides; Vendor Due Diligence.csv in the playbook	**Partial. Make it a full session.**
Change management and staff adoption	One "Staff adoption" slide in Session 12. Change management: 0 mentions	**Thin.**
Use cases beyond legal and tax	Investment research and invoices as transfer examples	**Missing: HR, sales, marketing, customer service, operations, mobile money, agribusiness.**
Follow-up after the course	None	**Missing. Check-ins at 30, 60 and 90 days prove transfer without tests.**

2.3 Value for money

Hourly cost makes the comparison clear. The prices are from the programme pages as shown in search summaries. The hourly figures are arithmetic on those summaries, and they use an assumed US$1 = UGX 3,600 that I did not check.

Programme	Hours and format	Price quoted	About per hour
KLAi Applied AI and Automation	24 h, live, private or group of up to 5	UGX 1,000,000	US$12 (UGX 41,700)
Oxford Said, Oxford AI Programme	About 60 h, 6 weeks online	£2,450	About £40
MIT Sloan/CSAIL, AI: Implications for Business Strategy	6 weeks at 6 to 8 h (inferred 36 to 48 h), online	US$3,850	About US$80 to 107
Imperial, AI for Business Transformation	6 weeks online	£1,700	Hours not published
Wharton, AI for Business	4 to 6 weeks, self-paced	US$850	Hours not published
HBS Online, AI Essentials for Business	4 weeks at 5 to 7 h, self-paced	US$1,949	About US$70 to 100
Section, Head of AI Bootcamp	5 weeks, about 25 h	US$5,000	About US$200
Lagos Business School, Transformational Leadership in AI	3 days, hybrid	NGN 1,200,000 + VAT	Hours not published
GIBS (South Africa), Partnering with AI	9 weeks online, 5 to 8 h a week	ZAR 5,860 + VAT	About ZAR 80 to 130
Wharton, Generative AI and Business Transformation	4 days in person	US$13,500 excl. travel	Hours not published
Google AI Essentials; Anthropic AI Fluency	3 to 10 h, self-paced	US$49 a month; free	Under US$10

What this means. The fee is a small fraction of the usual price per hour. Executives compare outcomes and effort, and the programmes that charge more also ask more of the learner (assignments, an organisational project). Your edge is real: a live instructor in Kampala, the learner's own tasks, and tools in a real account. Few of the programmes found advertise automations, a costed roadmap or vendor oversight, and none was found offering private delivery on the executive's own data. I could not find an executive AI programme from Strathmore, Makerere or the Uganda Management Institute.

Two cautions. A low fee can signal low value to senior buyers, so the offer should list the artefacts the executive keeps: policy, two or three automations, a 90-day plan and a business case. Hourly rates for one-to-one teaching should also not be copied from group university programmes; the earlier benchmark made the same point. Setting the price is your decision. This review only shows where the fee sits.

2.4 Branding and clarity

Area	Today	KLAi standard to apply
Palette	Navy, teal and orange on pale grey	Black, white, red #AE2525, gold #E0BE36 (gold as rules and dots only)
Typeface	Calibri in every slide	Lato (Bold for headings), already bundled in the authoring folder
Logo	No logo in slides or documents; the text “KLAi” in the footer	KLAi logo on the cover, section dividers and every footer
Text size	About 22% of slide text is 12 or 13 pt; many tables are small	Body 20 pt or larger; labels 14 pt or larger
Illustrations	Stock-style gears, robot, check marks and arrows	Fewer, explanatory diagrams and real tool screenshots (the author asked for this on 27 Oct)
Documents	Plain navy tables, no cover, no logo. Start Here is a .txt file	Branded cover and header, one-page session summaries, a Start Here PDF
Learner workbook	17 pages of mostly blank grids. Records are meeting-style	One page per session: today’s question, the decision, my task from my company, my result, my next step
Language	“Partner”, “firm”, “matter”, “we record” throughout	Executive wording: “leader”, “company”, “use case”, with law as one example

Clarity. The strongest slides state one idea and a decision, such as “The firm decision”. The weakest are table slides with six to ten small rows, and slides where a heading sits above one short sentence on a large empty field. A rule for the redesign: one message per slide, a title that states the message, at most 40 words, and a picture only when it explains something.

2.5 Housekeeping and reliability

- The Session 10 deck (28 slides) is absent from 02 Class Slides. File Integrity.json and Deck Manifest.json both list it, and a copy exists in 05 Course Maintenance/Authoring/Baseline/Final Decks. Restore it and re-run the integrity check.
- Live demonstrations rely on a Mac launcher, a Swift OCR tool, a private Zapier test and account-specific rehearsal. An executive who wants to repeat a demonstration on a Windows laptop cannot.
- The maintenance folder is large (validation records, run prompts, authoring baselines). It is useful to you and should stay out of anything a client receives.
- File names such as “Law Firm Implementation Playbook” and “Checked Contract Answers” say legal. A general edition needs neutral names and a legal lane.

3. Industry coverage benchmark

Frameworks and rules executives are expected to know in late 2026. The dates come from law-firm and consultancy summaries and should be checked against the primary text before they go on a slide.

Source	What matters for the course	Where it fits
NIST AI RMF 1.0 and GenAI Profile (AI 600-1)	Govern, Map, Measure, Manage; 12 generative AI risks; no certification	Session 11 already names the functions. Add the profile as a checklist.
ISO/IEC 42001	The certifiable AI management system standard	Mention as an option for larger firms and as a buyer question.
EU AI Act (Digital Omnibus 2026/1744)	Applies only to firms with EU-facing outputs. High-risk dates moved to Dec 2027 and Aug 2028. The AI literacy duty (Article 4) already applies.	Teach as an outside benchmark. Use Article 4 as a model for staff training.
OECD AI Principles (2024 update)	Safety, privacy, IP, information integrity, ability to override	Short reference slide.
African Union Continental AI Strategy (2024)	Asks states for national AI and data strategies	Context slide for East Africa.

Source	What matters for the course	Where it fits
Uganda	No AI statute. The Data Protection and Privacy Act 2019 applies in full. NITA-U runs the Personal Data Protection Office. The national AI strategy was promised for mid 2026 and could not be confirmed as released.	Session 11 has “Ugandan duties to examine”. Re-check the AI strategy status the week you teach it.
OWASP LLM Top 10 (2025)	Prompt injection ranked first; excessive agency sixth; least privilege and human approval as controls	Already taught through the injection test. Cite the source.
Adoption evidence	McKinsey 2025: 88% use AI in at least one function, about 39% report any EBIT impact. Deloitte 2026: only 21% have a mature agent governance model. MIT NANDA 2025: 95% saw no measurable return (not peer reviewed).	Use for a “why pilots fail” slide. These are large-firm global figures, not Ugandan SMEs.

Teaching executives. The common advice is to plan transfer to work from the start, agree a baseline before teaching, tie every week to a deliverable, and show results at 30, 60 and 90 days. Evaluation models such as Kirkpatrick levels 3 and 4 and Phillips ROI are used in a minority of programmes. Several blog figures about training ROI are left out here because they come from a single vendor source.

Use cases. Sourced benefits exist for customer service (13.8% more issues resolved per hour in a US study, with the largest gains for novices) and for accounts payable cost per invoice (vendor-site benchmarks). For HR, sales, operations and East African SMEs I found no solid sourced figure, so the course should teach how to measure a baseline and should not quote benefits.

4. Proposed executive edition

Same shape: 12 sessions of 2 hours, no tests, no homework required. Each session ends with something the executive keeps. Two build sessions put automations in the executive’s own tools. Legal and tax content becomes an optional lane that reuses the existing assets.

No.	Session	The executive leaves with	Reuses
1	Where AI fits in your business	A ranked list of five tasks from their own company	Session 1; decision slide pattern
2	How AI works and where it fails	Three reliability tests run on their own text	Sessions 2 and 3, shortened
3	Working with AI tools	A reusable brief and a checked briefing or report	Session 4; research method from Session 7
4	Your information	An inventory and a search assistant on their own documents	Sessions 5 and 6, shortened
5	Reviewing documents	A review table for a contract, invoice or policy of their choice	Session 8, with a general lane
6	Build 1: a no-code workflow	A working automation with an approval step	Session 9 concepts; new hands-on practice
7	Agents and controlled actions	A tool boundary and a stop condition for one agent	Sessions 9 and 10 tests
8	Build 2: test and measure	A test set, error list and time saved against the baseline	New; uses the baseline method from Session 12
9	Risk, security and the law	A first draft of the company AI-use policy and risk register	Session 11; add DPPA, EU AI Act where relevant, AI literacy
10	Buying and oversight	A vendor question list and a build, buy or partner decision	Session 4 vendor slides; Vendor Due Diligence.csv
11	The business case	Costs, benefits, owners and a go or no-go view	Session 12 capacity example; cost sheet
12	Demo day and 90-day roadmap	Two or three automations shown, policy and roadmap presented	Session 12 proposal slides

- **Legal and tax lane.** Sessions 7, 8 and 10 as an optional second block, or a separate edition for law firms and tax advisers.

- **Evidence instead of tests.** Keep the entry and exit diagnostic as a private self-check. Show progress through the artefacts and the 30, 60 and 90 day check-ins.
- **Feasibility.** Two or three automations in 24 hours need each learner's accounts set up before Session 6 and a rehearsal in the real account. The maintenance notes already list the connected demonstrations as unrehearsed.
- **Teaching depth.** Concept slides drop from 88 to about 50 by merging Sessions 2 and 3 and trimming optional detail.

5. Prioritised fix list

Priority	Action	Effort	Why
P1	Restore the Session 10 deck and re-run the integrity record	Small	The folder is incomplete
P1	Decide the executive edition outline and the automation tool	Decision	Everything else depends on it
P1	Add the KLAi slide and document template (logo, Lato, palette, footer)	Medium	Branding and clarity
P1	Build two hands-on sessions and rehearse them in the real account	Large	The outcome executives pay for
P2	Write the AI-use policy template and the business case template	Medium	Two named deliverables
P2	Add one-page session summaries and a one-page-per-session workbook	Medium	Replaces 17 mostly blank pages
P2	Generalise examples (HR, sales, finance, operations, East Africa) and wording	Medium	Any-industry audience
P2	Add the governance references (DPPA, EU AI Act, ISO 42001, AU strategy, OWASP)	Small	Closes coverage gaps
P3	Windows-friendly demonstrations and a PDF Start Here	Medium	Repeatable by clients
P3	Cut slide text density and replace stock icons with diagrams and screenshots	Large	Look and readability
P3	30, 60 and 90 day follow-up kit and a short outcomes survey	Small	Proof of value

6. What I could and could not verify

- I read the course files, counted slides, text sizes and keywords, and rendered slides and documents to inspect the look. I did not run the course tools or the Python scripts.
- Web pages could not be opened in this session. Programme prices, hours and regulation dates come from search summaries, and some fees appeared only on aggregator pages. The older Benchmark Review in the course folder opened primary pages on 26 October, so use it for any figure you plan to publish.
- I did not find a primary source for Uganda AI policy status after mid 2026, for Bank of Uganda AI guidance, or for East African SME adoption rates. Treat those as open.
- The per-hour figures are arithmetic on the summaries. The exchange rate of UGX 3,600 to US$1 is an assumption.
