DA22 Report and handover

Week 8, Hand over | Session 22 of 24 | Python for Data Analysis

Today's question. Does everything I submit open, rerun and agree with itself?

Objective. By the end: you can hand over a project that another person can open, rerun and check.

Before this session: DA21 Build and test the chart report. If you cannot explain the last example, use its error card with the instructor first.

Make

Restart the kernel and run all cells from the top. Confirm every number in the report appears in an output. Write the one-page report: question, data, method, three findings with their values, one recommendation and one limitation. Export it to PDF and reopen it. Submit project.ipynb, cleaning_log.md, your data dictionary, report.pdf or report.docx and AI_USE_LOG.md together through the route in START_HERE.pdf. Keep personal information out of every file.

Save your work as DA22. Keep the worked example and put your own attempt below it. Write two sentences: what you changed and how you checked it.

Error card

You see	It means	Fix
A claim in the report has no number behind it	The sentence was written from memory and not from an output.	Find the output cell that supports it, or remove the claim.
The report opens but the charts are missing	The PNG was not saved in the same folder, or the picture was linked and not inserted.	Insert the saved PNG into the document and export to PDF again.

Exit ticket

Everything I submitted opens, reruns and agrees with itself.

AI use follows AI_USE_POLICY.pdf. In weeks 1 to 6 no AI-generated solutions are used for exercises, labs or assessments. Practise for 20 to 30 minutes between classes by repeating the Make task with one value changed. If you are stuck for 30 minutes, save the error and bring it to class. A file saved on your laptop has not been submitted until you use the route in START_HERE.pdf.
