DA23 Explain it to a parent

Week 8, Hand over | Session 23 of 24 | Python for Data Analysis

Today's question. Can a parent say what I found, how I know, and what the data cannot tell us?

Objective. By the end: you can explain your project to a listener who has never seen code, in five minutes, with a chart and a limit.

Before this session: DA22 Report and handover. If you cannot explain the last example, use its error card with the instructor first.

Make

Make five slides: my question; what data I used; what I did; my most useful finding with its chart; the limitation and next step. Save as showcase.pptx and keep a PDF and screenshots as a backup. Rehearse with a timer. Practise answering: where did this number come from, what did you clean, and what can this data not tell us. Disclose any help or AI use. Show only invented or approved non-personal data. The instructor may follow the rehearsal with MODERN_AI_ORIENTATION.pdf, a 20-minute optional introduction with no assignment or mark.

Save your work as DA23. Keep the worked example and put your own attempt below it. Write two sentences: what you changed and how you checked it.

Error card

You see	It means	Fix
The talk runs over five minutes	There are too many slides or too much code on screen.	Keep one idea per slide and cut the slide that explains the method in detail.
The projector fails	The demonstration depends on a live notebook or the internet.	Use the PDF and the screenshots, and explain the workflow aloud.

Exit ticket

I can explain my project in five minutes without jargon and say what it cannot show.

AI use follows AI_USE_POLICY.pdf. In weeks 1 to 6 no AI-generated solutions are used for exercises, labs or assessments. Practise for 20 to 30 minutes between classes by repeating the Make task with one value changed. If you are stuck for 30 minutes, save the error and bring it to class. A file saved on your laptop has not been submitted until you use the route in START_HERE.pdf.
