ML24 Parent showcase and next steps

Week 8, Hand over | Session 24 of 24 | Machine Learning

Today's question. Can I show and explain my own work with nothing to help but what I know?

Objective. By the end: you can present your project, explain one decision, make one small code change without AI, and name your next learning goal.

Before this session: ML23 Explain the project to a parent. If you cannot explain the last example, use its error card with the instructor first.

Words for today

Word	What it means	Think of it like this
showcase	A short event where you present your project to parents and guardians.	A school open day.
unaided	Done with no AI assistance, with assistant windows closed.	A closed-book exam.
completion record	A note of the track finished and the evidence assessed.	A school report.
portfolio	The folder of your own project files and feedback.	Your best exercise books.
next step	One learning goal for after the camp.	The next chapter you plan to read.
feedback	A strength and a next step from the instructor.	A teacher's comment.

Block A. Present and explain

Each learner has five minutes to present and three minutes for questions. Explain the input, the output and one failure case.

Predict. Write the one decision in your project you will explain if asked. Write your guess on paper first.

Your guess, written before you run it

Run it, then compare. The instructor uses the same demonstration rubric for every learner. You show your own work, explain one decision, and answer an instructor-chosen question about your code unaided. Close assistant windows and turn off generative suggestions. If the technology fails, use the screenshot backup and explain the steps; a short live rerun can be arranged later.

Investigate.

1. What is a failure case?
2. What if the laptop fails?

Modify. Say one thing your model gets wrong and why.

Block B. A small change, unaided

The instructor chooses one small change to your code, such as a different test size or one more input. Make it and say what you expect.

Predict. Before the change, predict whether your error will go up or down. Write your guess on paper first.

Your guess, written before you run it

Run it, then compare. The change is small on purpose. It shows that you understand the notebook. A completion record follows the published policy: attendance, both checkpoints, the project and this demonstration. The certificate is issued by the programme provider and is not a university qualification or a certificate from another course provider.

Investigate.

1. What does the certificate show?
2. What is a good next learning goal?

Modify. Write your next learning goal on one line.

Make

Present your project, say who helped you, and choose one next learning goal. Keep your project folder and feedback after the camp.

Save your work as ML24. Keep the worked example and put your own attempt below it. Write two sentences: what you changed and how you checked it.

Error card

You see	It means	Fix
The change breaks the notebook	A name or a cell order changed.	Restart, run all cells, then read the last line of the error.
The demonstration is too long	More than one idea per slide.	Use the five slides and leave the extra detail for questions.

Exit ticket

I can show my own work, explain one decision, and change one thing in my code without help.

AI use follows AI_USE_POLICY.pdf. In weeks 1 to 6 no AI-generated solutions are used for exercises, labs or assessments. Practise for 20 to 30 minutes between classes by repeating the Make task with one value changed. If you are stuck for 30 minutes, save the error and bring it to class. A file saved on your laptop has not been submitted until you use the route in START_HERE.pdf.
