ML24 Parent showcase and next steps

Week 8, Hand over | Session 24 of 24 | Machine Learning

Today's question. Can I show my project and explain how I built it?

Objective. By the end: you can present your project, explain one decision, try one small change live with no AI assistant open, and name your next learning goal.

> **WHERE THIS IS USED**
> Start-ups and tech hubs hold demo days where builders show what they made in a few minutes and answer questions. Today is your demo day. What do you want your family to remember?

Before this session: ML23 Explain the project to a parent. If you cannot explain the last example, use its error card with the instructor first.

Words for today

Word	What it means	Think of it like this
showcase	A short event where you present your project to parents and guardians.	An open day at a workshop.
live change	One small edit to your own code, made while people watch.	Adjusting a recipe while friends look on.
certificate	A programme certificate for finishing the camp: most classes, a build log and a finished project.	A badge for finishing a trail.
project folder	The folder of your own project files, your build log and your feedback.	Your best work in one box.
next step	One learning goal for after the camp.	The next chapter you plan to read.
feedback	A strength and a next step from the instructor.	A coach's tip after training.

Block A. Present and explain

Each learner has five minutes to present and three minutes for questions. Explain the input, the output and one failure case.

Predict. Write the one decision in your project you will explain if asked. Write your guess on paper first.

Your guess, written before you run it

Run it, then compare. Every learner follows the same friendly order. You show your own work, explain one decision, and answer a question from the audience about your code. Close assistant windows and turn off generative suggestions while you present. If the technology fails, use the screenshot backup and explain the steps; a short live rerun can be arranged later.

Investigate.

1. What is a failure case?

2. What if the laptop fails?

Modify. Say one thing your model gets wrong and why.

Block B. A small change, live

The instructor suggests one small change to your code, such as a different split size or one more input. Make it and say what you expect.

Predict. Before the change, predict whether your error will go up or down. Write your guess on paper first.

Your guess, written before you run it

Run it, then compare. The change is small on purpose. It is a chance to show how your notebook works. The programme certificate goes to learners who attended or made up most classes, kept their build log and showed a finished project. The camp has no tests and no scores. The certificate is issued by the programme provider and is not a university qualification or a certificate from another course provider.

Investigate.

1. What does the certificate show?
2. What is a good next learning goal?

Modify. Write your next learning goal on one line.

Make

Present your project, say who helped you, and choose one next learning goal. Keep your project folder and feedback after the camp.

Save your work as ML24. Keep the worked example and put your own attempt below it. Write two sentences: what you changed and how you checked it.

Error card

You see	It means	Fix
The change breaks the notebook	A name or a cell order changed.	Restart, run all cells, then read the last line of the error.
The demonstration is too long	More than one idea per slide.	Use the five slides and leave the extra detail for questions.

Exit ticket

I can show my own work, explain one decision, and try one small change in my code.

AI use follows AI_USE_POLICY.pdf. In weeks 1 to 6 no AI-generated solutions are used for exercises, labs or build tasks. Practise for 20 to 30 minutes between classes by repeating the Make task with one value changed. If you are stuck for 30 minutes, save the error and bring it to class. A file saved on your

laptop has not been shared until you use the route in START_HERE.pdf.
