Leading with AI, Leadership Edition, KLAi Professional Learning

Fifteen sessions of two hours for senior leaders, with no mathematics. Sessions 0 to 10 show what AI does, where it pays in each industry (with named, sourced cases), what goes wrong and how to judge it. Sessions 11 to 14 are practicals in which the leader redesigns a workflow, plans for their people, sets the rules, checks the data and leaves with an AI Opportunity Portfolio and a 90-day plan.

What is in this folder

01 Course Overview	One page to share with a learner before the course.
02 Class Slides	Fifteen decks (Session 0 to Session 14), with a spoken script in the speaker notes.
03 Learner Materials	The Learner Workbook, the Take-away Sheets (one page per session), the Industry Use-Case Atlas (uses and named cases by industry), the Questions to Ask sheet, the Templates for the practicals, the Follow-up Kit, and the Practice Files (the case company data).
04 Facilitator Materials	The Presenter Script (every slide's spoken script in order, to read from paper or a tablet), the Facilitator Guide with answers and fallbacks, the Answer Keys and the Rehearsal Record. Keep this folder away from learners.
05 Course Maintenance	The sources that build the decks and documents, checks, and notes for whoever maintains the course.

Before the first class

- Send the Course Overview and the Course Handbook.
- Rehearse each demonstration once and complete the Rehearsal Record. The scripts are in 05 Course Maintenance/Build/demo_runs.
- Read the Facilitator Guide section "How to teach this course".

Rules that keep the course honest

- Never describe an AI result as observed unless you ran it and recorded it.
- Use only sample or invented data with free tools. The demonstration mailbox is invented.
- Rebuild the decks and documents from 05 Course Maintenance/Build. Do not edit generated files by hand.
